

Job Title: AI Engineer

Location: Remote / On-site

Job Type: Full-time / Contract

Job Overview:

We are seeking a highly skilled **AI Engineer** to design, develop, and deploy AI-powered solutions. The ideal candidate has strong expertise in machine learning, deep learning, data engineering, and building scalable AI systems.

Key Responsibilities:

- Develop, train, and optimize machine learning and deep learning models.
- Build NLP, computer vision, and generative AI applications.
- Integrate AI models into software products and cloud infrastructures.
- Perform data preprocessing, feature engineering, and dataset management.
- Collaborate with software engineers and product teams to deploy AI pipelines.
- Monitor model performance and continuously improve accuracy.
- Work with cloud platforms (AWS, Azure, GCP) for AI/ML development.
- Research new AI technologies and implement industry best practices.

Required Skills & Qualifications:

- Strong knowledge of Python, FastAPI, n8n, Langgraph, langchain.
- Experience with LLMs, embeddings, vector databases, and prompt engineering.
- Familiarity with APIs, microservices, and AI model deployment.
- Strong understanding of algorithms, neural networks, and probability.
- Excellent analytical and problem-solving skills.

Preferred Qualifications:

- Experience in Reinforcement Learning / RAG / fine-tuning LLMs.
- Prior experience building production-level AI systems.
